BORANG PENGESAHAN DAN KELULUSAN SARANAN

Nama Pelajar : Anita Suganthi d/o Kolandasamy
No. Matrik : S 3122
Nama Penyelia : Dr. Faizah bt. Shaharom
Tajuk Projek : Digenetic trematodes found in marine fish of Port Dickson

Dengan ini disahkan bahawa saya telah membaca, membetulkan dan meluluskan saranan projek tersebut di atas sebagai satu projek yang boleh dijalankan di Fakulti Perikanan dan Sains Samudera pada tempoh masa yang diberikan.

Tandatangan : 

Nama Penyelia : (Dr. Faizah bt. Shaharom)

Tarikh : 12/4/96

(Kegunaan Ketua Jabatan Sahaja)

Saranan tersebut : *

- a. tidak diluluskan
- b. perlu diperbaiki dan dikemukakan semula
- c. diluluskan tanpa pembetulan
- d. diluluskan dengan cadangan atau pembetulan berikut :-

ACKNOWLEDGMENT

My sincere appreciation to my supervisor, Dr. Faizah Shaharom for her supervision and invaluable foresights regarding this project. I would also like to convey my warmest gratitude to Dr. Abol Munafi Ambok Bolong for his emphatic support, patience and comments on the versions of the project paper.

I am also grateful to Puan Nahariah bte Mat Lia, Puan Kartini bte Mohamad who have helped me during my project research and staff members of COMAS, Port Dickson who helped in collection of fish samples.

I would wish to express my deep appreciation to my parents; brothers, Gerald Anthony and Augustine; and Aunt Santhana Mary for their support and forebearance during my course of study.

Not forgetting too, my dearest friend Kasantra, coursemates Azlina, Ella, Ejaria, Laurik; and roommates who have helped in one way or another in completing my project. Last but not least, thanks to all lecturers who have taught and gave me guidance during the past five years at UPM.

Anita Suganthi d/o Kolandasamy

ABSTRACT

A study was carried on the digenetic trematodes in marine fish from the coastal waters of Centre of Oceanography and Mariculture Study (COMAS) in Port Dickson, Negeri Sembilan. The fish examined were *Siganus canaliculatus*, *Siganus dubiosus*, *Siganus guttatus*, *Siganus javus*, *Siganus vermiculatus*, *Plectropomus maculatus* and *Epinephelus tauvina*. Parasites were stained using three types of stains namely Berland stain, Gower's carmalum and Mayer's hematoxylin. *Gyliauchen* sp. was found in all five *Siganus* species studied. Whereas, *Diplangus* sp. harboured the stomach of *Siganus guttatus* only and an unidentified digenean was found in *Siganus canaliculatus*. Two various forms of *Prosorhynchus* spp. as *Prosorhynchus* sp. A and *Prosorhynchus* sp. B were found in *Plectropomus maculatus*. *Epinephelus tauvina* was parasitized by *Allopodocotyle* sp., under Family Opecolidae and *Prosorhynchus* sp. C. The morphology of the parasites are described.

ABSTRAK

Kajian telah dijalankan terhadap trematod digenea di dalam ikan-ikan marin dari perairan pantai Centre of Oceanography and Mariculture Study (COMAS), Port Dickson, Negeri Sembilan. Ikan-ikan dikaji terdiri daripada *Siganus canaliculatus*, *Siganus dubiosus*, *Siganus guttatus*, *Siganus javus*, *Siganus vermiculatus*, *Plectropomus maculatus* dan *Epinephelus tauvina*. Parasit-parasit yang dijumpai telah diwarnakan menggunakan pewarna Berland, Gower's carmalum dan Mayer's hematoxylin. *Gyliauchen* sp. dijumpai di dalam usus kelima-lima spesis *Siganus*, manakala *Diplangus* sp. didapati secara khusus di dalam perut *Siganus guttatus* sahaja dan satu spesimen digenea yang tidak diidentifikasi didapati di dalam usus *Siganus guttatus*. Tiga spesies dari genus *Prosorhynchus* spp. yang telah ditemui, dinamakan sebagai *Prosorhynchus* sp. A, *Prosorhynchus* sp. B dan *Prosorhynchus* sp. C. *Prosorhynchus* sp. A dan *Prosorhynchus* sp. B telah dijumpai di dalam *Plectropomus maculatus*. Manakala, *Prosorhynchus* sp. C ditemui pada *Epinephelus tauvina* yang juga menjadi perumah kepada *Allopodocotyle* sp. dari Famili Opecoiledae. Deskripsi berkenaan morfologi parasit-parasit yang dijumpai telah diberikan.
