PENGAKUAN DAN PENGESAHAN LAPORAN PROJEK PENYELIDIKAN I
DAN II

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk:

Synthesis of A New Thermotropic Liquid Crystal Monomer oleh Noorhafizah Binti Sultan No. Matrik UK 7036 telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Kimia sebagai memenuhi sebahagian daripada keperluan memperolehi Ijazah Sarjana Muda Sains (Sains Kimia) Fakulti Sains dan Teknologi, Kolej Universiti Sains dan Teknologi Malaysia.

ACKNOWLEDGEMENTS

Bismillahirrahmanirrahim

First and for most, I gave my infinite thanks and grateful to Allah s.w.t. for giving the strength, confidence and patience in preparing this research report. Secondly, I would like to express my deepest thanks and appreciation to my honourable project supervisor, Mr. Hussin Bin Haji Zain for his endless guidance and assistance while I'm doing this project, and also for being understanding and supportive for all the problems I had faced while completing this thesis.

Sincere thanks to all the lab assistants especially Mr. Jamalludin, Mr. Tarmizi and Mr. Ruzieman for their assistance. I would also like to thanks Cik Norie and Mr.Azim for their valuable help. Special thanks also to all my friends for their encouragement and support.

Last but not least, special grateful to my beloved family for their understanding, support, patience and sacrifices which had helped me pass through all the obstacles encountered. Million of thanks to Nor Azimah for being understanding and always there when I'm in need. All her help and advices will always be remembered.

s	-	strong
m	-	medium
w	-	weak

ABSTRACT

Liquid crystals phase is an intermediate phase of matter which is observed between crystalline solid phase and isotropic liquid phase in some substances. This research is focused on synthesizing and characterizing the structure of new thermotropic liquid crystal monomer. In this study, three precursors were used in order to synthesis liquid crystal structure which are A-Phenol (2,2-Bis (4-hydroxyphenyl) propane) as the mesogenic group, 3-chloro-1-propanol as the spacer linkage and allyl chloride as the polymer backbone. Spectroscopy and chromatography analysis were conducted for conformation of the product obtained. However, mass spectroscopy analysis revealed that the product obtained was not a liquid crystal monomer due to different m/z value.

ABSTRAK

Fasa hablur-cecair adalah fasa perantaraan yang telah dikenalpasti wujud di antara fasa pepejal kristal dan fasa cecair isotropik bagi beberapa jenis sebatian. Kajian ini memfokuskan kepada penghasilan dan pencirian struktur monomer hablur-cecair termotropik yang baru. Dalam penyelidikan ini, tiga bahan awal digunakan untuk mensintesikan molekul hablur-cecair iaitu A-Phenol (2,2-Bis (4-hydroxyphenyl) propane) sebagai kumpulan mesogen, 3-kloro-1-propanol sebagai peruang sambungan dan alil klorida sebagai tulang belakang polimer. Analisis spektroskopi dan kromatografi dijalankan untuk pengenalpastian hasil yang diperolehi. Namun begitu, analisis spektroskopi jisim menunjukkan bahawa hasil yang diperolehi bukanlah monomer hablur-kristal berdasarkan kepada nilai m/z yang berbeza.
