APPROVAL AND CERTIFICATION FORM
RESEARCH PROJECT I AND II

I certify that the research report entitled Heavy Metal Concentrations in Pahang Coastal (South China Sea) Sediment in Relation to Organic Carbon Content by Wan Norazyati binti Tengah @ Wan Ngah, Matric No. UK6605 have been read and all corrections recommended by the examiners have done. This research report is submitted to the Department of Marine Science in partial fulfillment of the requirements for the degree of Bachelor of Science in Marine Science, Faculty of Science and Technology, Kolej Universiti Sains dan Teknologi Malaysia.

Approval by:

First Supervisor
Name:

Prof. Dr. Noor Azhar bin Mohamed Shazili
Dean

ACKNOWLEDGEMENTS

Firstly, thanks to Allah that provides His bountiful blessings for all the work done.

I would like to thank Professor Dr. Noor Azhar Mohamed Shazili, my supervisor for being generous in sharing his knowledge and guidance in the conduct of this research. Thanks also for his help and suggestions during writing my thesis have made my research possible and successful. Secondly I would like to thank Dr. Antonina Abdullah, my second supervisor for her advice and opinions for my research project.

Thanks to the Faculty of Science and Technology especially the laboratory assistants for allowing me to use the facilities at the laboratory and for their helping hands. I would also like to express my deep appreciation and thankful to Master student, Joseph and Benny who helped in my research and for their constructive suggestions in analysis my data.

I'm grateful to thanks to my family for their supported and understand. Thanks also to my friends especially Jue, Eja, Yati, Dila and so more for extended their help during I do my research. Last but not least, thank you to all who were involved directly or indirectly during the completion of my project.

ABSTRAK

Sebanyak 26 sampel sedimen telah diambil dari Perairan Pantai Pahang (Laut China Selatan) dan dianalisis untuk mengkaji kepekatan Al, Fe, Mn dan Cr. Analisis dilakukan dengan menggunakan kaedah pencernaan sepenuhnya dan dikira dengan menggunakan flame AAS. Sampel juga dianalisis untuk menentukan kandungan karbon organik, taburan saiz sampel dan ciri lain yang mempengaruhi taburan logam berat di dalam sedimen. Keputusan menunjukkan bahawa julat kepekatan logam berat adalah 0.29 - 4.73 % (min dan sisihan piawai 1.54 ± 1.09 %) bagi Al, 0.08 - 3.19 % (min dan sisihan piawai 1.39 ± 0.86 %) bagi Fe, 2.54 to 945.46 $\mu\text{g/g}$ (min dan sisihan piawai 420.80 ± 242.37 $\mu\text{g/g}$) bagi Mn dan 0.08 to 129.89 $\mu\text{g/g}$ (min dan sisihan piawai 35.40 ± 32.61 $\mu\text{g/g}$) bagi Cr. Analisis perhubungan korelasi antara logam berat dengan kandungan karbon organik menunjukkan hanya Al menunjukkan berkolerasi positif bermakna dengan karbon organik manakala Fe, Mn and Cr berkolerasi dengan sedimen saiz partikel.

ABSTRACT

Twenty-six sediment samples were collected from Pahang Coastal (South China Sea) and analyzed for Al, Fe, Mn and Cr concentrations. The analysis was carried out using total digestion method and measurements by flame Atomic Absorption Spectrometry (AAS). The sediment were also analyzed for organic carbon content, grain size distribution and other general characteristic that may influence the distribution of heavy metals in sediment. The range of concentrations of metals were 0.29 to 4.73 % (mean and standard deviation of 1.54 ± 1.09 %) for Al, 0.08 to 3.19 % (mean and standard deviation of 1.39 ± 0.86 %) for Fe, 2.54 to 945.46 $\mu\text{g/g}$ (mean and standard deviation of 420.80 ± 242.37 $\mu\text{g/g}$) for Mn and 0.08 to 129.89 $\mu\text{g/g}$ (mean and standard deviation of 35.40 ± 32.61 $\mu\text{g/g}$) for Cr. Correlation analysis between metals with organic carbon indicates that only Al had a significant positive relationship to organic carbon while Fe, Mn and Cr were only correlated to sediment particle size.
