ISOLATION, CHARACTERIZATION AND IDENTIFICATION OF CORAL MUCUS
ASSOCIATED BACTERIA (ACROPORA CERVICORNIS) FROM
BIDONG ISLAND, TERENGGANU MALAYSIA

By

Murugan Kalimutho

Research Report submitted in partial fulfillment of
the requirements for the degree of
Bachelor of Science (Biological Sciences)

Department of Biological Sciences
Faculty of Science and Technology
KOLEJ UNIVERSITI SAINS DAN TEKNOLOGI MALAYSIA
2006

This project should be cited as:

Murugan, K. Isolation, Characterization and Identification of Coral Mucus Associated Bacteria (*Acropora cervicornis*) From Bidong Island, Terengganu Malaysia. Udergraduate thesis, Bachelor of Science (Biological Science), Faculty of Science and Technology, Kolej Universiti Sains dan Teknologi Malaysia. Terengganu. 104pp.

No part of this project report may be produced by any mechanical, photographic or electronic process, or in the form of phonographic recording, nor may it be stored in retrievals system, transmitted or otherwise copied for public or private use without written permission from the author and the supervisor(s) of the project.

PENGAKUAN DAN PENGESAHAN LAPORAN
PROJEK PENYELIDIKAN I DAN II

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk: **ISOLATION CHARACTERIZATION AND IDENTIFICATION OF CORAL MUCUS ASSOCIATED BACTERIA (*Acropora cervicornis*) FROM BIDONG ISLAND, TERENGGANU MALAYSIA** oleh **MURUGAN KALIMUTHO**, no. matrik: **UK 8813** telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Biologi sebagai memenuhi sebahagian daripada keperluan memperoleh ijazah **SARJANA MUDA SAINS (SAINS BIOLOGI)**, Fakulti Sains dan Teknologi, Kolej Universiti Sains dan Teknologi Malaysia.

Disahkan oleh:

Whatever that has happened, was for good
Whatever that is happening, is also for good
Maybe whatever that happen in future, ought to also be for good
What have you lost, that is yours that you are weeping?
What have you brought, for you to lose it?
What have you created for it to be wasted?
Whatever that you took, you have taken it from here (me)
Whatever that you gave, you have given it to this Universe (me)
Whatever that is yours today, will be somebody else's in future

This is universal principle and the essence of my creation

-Bhagavan Sri Krishna-

Smile

A Smile costs nothing, but gives much. It enriches those who receive, without making poorer those who give. It takes a moment, but the memory of it sometimes lasts forever. None is so rich or might that he can get along without it; none is so poor but that he can be made rich by it. A smile creates happiness in the home, fosters good will in business, is the countersign of the weary, cheer to the discouraged, sunshine to the sad, and it is nature's best antidote for trouble. Yet it cannot be brought, begged, borrowed, or stolen, for it is something that no value to anyone until it is given away. Some people are tired to give you a smile. Give them one of yours, as none needs a smile as much as he who has no more to give

ACKNOWLEDGEMENT

I would like to convey my thanks for everyone who gives me advice on how to handle this project and for them who being supportive for me no matter what difficulty I faced with. I appreciate and honor each and every one of you.

First and foremost, I wish to express my sincere gratitude and appreciation to thank Dr. Aziz Ahmad who is my supervisor for this project and for his advice and guidance on this project. I learn many new things in this research field through his guidance and dedication. Also I wish to convey my sincere gratitude to Dr.Zaleha Kassim for guiding me throughout my field work for this project in Bidong Island.

In addition I would like to thank all the other lecturers and lab staff of department of Biological Sciences, KUSTEM , Associate Professor Dr Mohd Effendy Abd Wahid and Dr Najihah who helped me throughout the completion of this project.

I also wish to thank my parents and siblings who helped to make this project a success and not forgotten to convey my gratitude and thanks to my beloved one Miss Dineswary who helps me and give full support for the completion of this project very well. Same thank goes to my beloved friends who gave me full strength to finish this project. I appreciate every bit of encouragement you gave me to make this project a success.

ABSTRACT

Isolation, characterization and identification of bacteria from mucus of *Acropora cervicornis* collected from Bidong Island Terengganu were achieved by using biochemical test and molecular technique. The bacteria were isolated using specific microbiology method and cultured in Sucrose Sea Water agar (SSW). The morphology and physiological characteristics were tested in various media such as MacConkey agar, Pseudomonas agar and TCBS agar. RAPD-PCR method was used to identify the genetic variability of the bacteria. Thirty isolates were managed to culture in-vitro. The biochemical tests reveal that, these bacteria can be divided into major group as γ -proteobacteria, α -proteobacteria, High G+C gram positive bacteria, CFB group and unknown. The bacteria were identified in species level such as *Pantoea dispersa*, *Pseudomonas sp*, *Entrobacter agglomerans*, *Cadacea darisae*, *Serratia plymuthica*, *Citrobacter youngae*, *Erwinia herbicola*, *Vibrio sp*, *Klebsiella pneumonia* subspecies *ozanae*, *Aeromonas caviae*, *Alteromonas putrefaciens*, *Serratia sp*, *Alteromonas sp*, *Moraxella sp*, *Photobacterium sp*, *Yersinia bercovieri*, *Vibrio metschnikovii*, *Acinetobacter sp*, *Yersinia enterocolitica*, *Brucella sp*, *Micrococcus sp*, *Micrococcus varians*, *Micrococcus roseus*, *Actinomyces sp* and *Flavobacterium sp*. Many bacteria isolates have demonstrated high levels of genetic variability which the coefficient index shows that bacterial communities in mucus of *A. cervicornis* are in a range of 0 to 1.0. Dendrogram reveal the variability of the genetic level. Insufficient data were obtained to support RAPD studies of the bacteria which obtained from mucus.

Pengasingan, Pencirian dan Pengecaman Bakteria yang Berkait Rapat dengan Mucus Terumbu Karang (*Acropora cervicornis*) dari Pulau Bidong, Terengganu

ABSTRAK

Pengasingan, pencirian dan pengecaman bakteria daripada mucus karang *Acropora cervicornis* dikutip dari pulau Bidong, Terengganu telah dicapai dengan menggunakan ujian-ujian biokimia dan teknik molekul DNANYA. Bakteria- bakteria ini telah dipencilkan dengan menggunakan kaedah mikrobiologi yang khusus dalam agar 'Sucrose Sea Water (SSW)'. Pencirian morfologi dan fisiologinya telah dilakukan dengan menggunakan pelbagai jenis media seperti MacConkey, Pseudomonas dan TCBS. Kaedah RAPD-PCR digunakan untuk mengetahui kepelbagaian genetik bakteria. Tiga puluh bakteria berjaya dikultur dan diuruskan 'in-vitro'. Ujian-ujian biokimia telah mengelaskan bakteria ini kepada empat kumpulan utama sebagai 'γ-proteobakteria', 'α-proteobakteria', 'High G+C gram positif bakteria', 'kumpulan CFB' dan ada bakteria tidak dapat dikenal pasti kumpulannya. Bakteria yang dikenal pasti sehingga tahap spesis adalah *Pantoea dispersa*, *Pseudomonas sp*, *Enterobacter agglomerans*, *Cadacea darisae*, *Serratia plymuthica*, *Citrobacter youngae*, *Erwinia herbicola*, *Vibrio sp*, *Klebsiella pneumoniae* subspecies *ozanae*, *Aeromonas caviae*, *Alteromonas putrefaciens*, *Serratia sp*, *Alteromonas sp*, *Moraxella sp*, *Photobacterium sp*, *Yersinia bercovieri*, *Vibrio metschnikovii*, *Acinetobacter sp*, *Yersinia enterocolitica*, *Brucella sp*, *Micrococcus sp*, *Micrococcus varians*, *Micrococcus roseus*, and *Actinomyces sp* dan *Flavobacterium sp*. Kebanyakan bakteria yang dipencil mencirikan tahap kepelbagaian genetik yang tinggi

dimana index koefisian menunjukkan komuniti bakteria dalam mukus *Acropora cervicornis* berada dalam julat 0-1.0. Dendogram menunjukkan kepelbagaian genetik. Walaubagaimanapun, kekurangan data yang diperolehi tidak dapat menyokong kajian RAPD yang diperolehi daripada mukus.
