JABATAN SAINS MARIN FAKULTI PENGAJIAN MARITIM DAN SAINS MARIN UNIVERSITI MALAYSIA TERENGGANU

PENGAKUAN DAN PENGESAHAN LAPORAN PROJEK PENYELIDIKAN I DAN II

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk: Species Abundance Of Jellyfish In Kuala Terengganu Waters oleh Mohd Afiq Bin Md Razi, No. Matrik UK 10543 telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Marin sebagai memenuhi sebahagian daripada keperluan memperolehi ijazah Sarjana Muda Sains (Biologi Marin), Fakulti Pengajian Maritim dan Sains Marin, Universiti Malaysia Terengganu.

ACKNOWLEDGEMENTS

Praise upon to Allah for His kindness, I can finish my final year project report after giving so much effort to it. First of all, thanks to my supervisor Y.M. Tengku Fara Kamilia bt. Tengku Mohd Kamil for guiding me to complete this project.

I would like to thank Mr. Mat Hassan bin Ibrahim and Lembaga Kemajuan Ikan Malaysia (LKIM) for helping me with my samplings at Pulau Kambing. I would also want to send my gratitude to all my friends for all the helps me in the final year project. Finally, I would like to send my greatest appreciation to my family especially my beloved parents for giving me so much support throughout these successful years.

Thank you.

ABSTRACT

Jellyfish are marine invertebrates that classified in the Phylum Cnidaria. This phylum consists of the Class Scyphozoa, Cubozoa dan Hydrozoa. This research aimed to identify the species of jellyfish that occur in the Kuala Terengganu coastal waters. Trawling method was used in this research for five times starting from September 2006 – March 2007. There were three Orders occur in Kuala Terengganu coastal waters that identified as jellyfish from Order Semaeostomeae, Rhizostomeae and Cubomedusae. Every Order classified has different morphology. Distributions of jellyfish around the world's ocean were sporadic and seemingly unpredictable in nature. Diversity of jellyfish caught is analyzed by using Shannon-Weiner Index and species evenness. Relationship between wet weight (w/w) and bell diameter (BD) were analyzed according to species caught. For this relationship, it shows significant correlation for species studied in this research. The highest diversity of jellyfish in this project is from the Order Semaeostomeae and followed by species from Order Cubomedusae and Rhizostomeae. The diversity of jellyfish was according to seasonal changes.
