PENGAKUAN DAN PENGESAHAN LAPORAN
PROJEK PENYELIDIKAN I DAN II

Adalah ini dimaklumkan dan disahkan bahawa laporan penyelidikan bertajuk: **Mineralogical of Kuala Ibai Estuarine Sediments** oleh **Abdul Manap Bin Samlee**, No. Matrik: **UK 9640** telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Samudera sebagai memenuhi sebahagian daripada keperluan memperolehi Ijazah Sarjana Muda (Sains Samudera), Fakulti Pengajian Maritim dan Sains Marin, Universiti Malaysia Terengganu.

ACKNOWLEDGEMENTS

First of all, I would like to thanks God for the guidance and blessing throughout the project. I would also like to thank my supervisor, Dr. Nor Antonina Abdullah for her precious guidance, advice and continuous support throughout the completion of this project. I really appreciate her for giving me the chance to do this great research. Besides that I am also felt very fortunate, to be able to experience the research work.

Thanks also goes to my fellow course mates especially, Sharifah Nur Faizah, Siti Waznah, Mohd Masrul Masduki, and Khairul Azwan for their help, starting from the day of the sampling to the lab work, until the completion of this thesis. Thank you for the sharing and caring, it was a great memory to know and have you guys.

Thanks also go to the lab assistants of Oceanography Laboratory especially En. Sulaiman and En.Raja for allowing me to use the apparatus and instrument during my lab work. Last but not least, my deepest appreciation to my beloved family, you always in my heart no matter where I am. This project will not be able to complete without the help of any one above. Thank you very much.

ABSTRACT

This study was conducted to determine the mineral content and the textural classes of the sediments of Kuala Ibai River estuarine. The sediments were collected from ten stations which covered an area of 3 km² by using Van Veen Grab. The sediments were analyzed by using the following methods; (i) *Dry Sieving and Hydrometer Method*, for textural class analysis, (ii) *X-Ray Diffractometer (XRD)*, for silt and clay fractions, (iii) *Quantitative Mineral Estimation (QME)*, for heavy mineral analysis, and (iv) *Scanning Electron Microscope (SEM)*, to determine the minerals elements and oxides. The results of *XRD* analysis showed that the sediment of Kuala Ibai River estuary is highly dominated by *quartz* which has the percentage more than 65%. Besides, other primary clay minerals that occurred in low percentage are *kaolinite*, *illite*, *montmorillonite*, *calcite*, *chlorite*, *goethite*, *mica* and *feldspar*. The result for QME analysis also showed that the *quartz* is the dominant mineral in the study area and it was found in stations 1, 2 and 3, while other heavy minerals which occurred in trace amounts are *andalusite*, *hydroilmenite*, *ilmenite*, *iron oxide*, *leucoxene*, *magnetite*, *pyroxene*, *mica*, *tourmaline* and *zircon*. The texture analysis showed that the dominant texture class is clay, which found especially in stations 5, 6, 7, 8, 9 and 10, while sand texture class was only found at the river mouth of the estuary (Stations 1, 2, 3 and 4).

ABSTRAK

Kajian yang dijalankan ini bertujuan untuk mengenalpasti kandungan dan jenis mineral yang terkandung dalam sampel tanah serta kelas tekstur bagi taburan sedimen di kawasan muara Sungai Kuala Ibai. Kajian ini dijalankan di kawasan yang merangkumi 3 km^2 terhadap 10 stesen dengan menggunakan pencekau Van Veen. Sampel tanah telah dianalisa menggunakan beberapa kaedah; (i) Ayakan kering dan Kaedah *Hydrometer*, untuk pengelasan tekstur tanah (ii) *X-Ray Diffractometer (XRD)*, untuk analisa fraksi kelodak dan liat, (iii) *Quantitative Mineral Estimation (QME)*, untuk analisa mineral berat, dan (iv) *Scanning Electron Microscope (SEM)*, untuk mengenalpasti kandungan mineral serta unsur-unsur oksida. Berdasarkan keputusan analisa *XRD*, sedimen di kawasan muara Sungai Kuala Ibai mempunyai kandungan *quartz* yang dominan iaitu melebihi 65%. Selain itu, mineral primer lain yang hadir dalam peratusan yang lebih rendah ialah *kaolinite*, *illite*, *montmorillonite*, *calcite*, *chlorite*, *goethite*, *mica* dan *feldspar*. Analisa *QME* juga menunjukkan *quartz* adalah mineral yang dominan di kawasan kajian iaitu dalam peratusan yang tinggi di stesen 1, 2, dan 3, berbanding mineral berat yang lain yang hanya hadir dalam bentuk surih seperti *andalusite*, *hydroillmenite*, *ilmenite*, *iron oxide*, *leucoxene*, *magnetite*, *pyroxene*, *mica*, *tourmaline* dan *zircon*. Analisa pengelasan tekstur sedimen menunjukkan tekstur tanah berliat mendominasi kawasan kajian khususnya di stesen 5, 6, 7, 8, 9 dan 10, manakala tekstur tanah berpasir hanya terdapat di kawasan muara sahaja (Stesen 1, 2, 3 dan 4).
