Final Research Project Report Declaration and Verification Form

DEPARTMENT OF MARINE SCIENCE  
FACULTY OF MARITIME STUDIES AND MARINE SCIENCE  
UNIVERSITI MALAYSIA TERENGGANU

DECLARATION AND VERIFICATION REPORT  
RESEARCH PROJECT I AND II

It is hereby declared and verified that this research report entitled:

Distribution of Hydrocarbon in Sediment of Sungai Kuala Terengganu by Norden bin Salam, Matric No. UK 16701 has been examined and all errors identified have been corrected. This report is submitted to the Department of Marine Science as partial fulfillment towards obtaining the Degree Bachelor of Science (Marine Science), Faculty of Maritime Studies and Marine Science, Universiti Malaysia Terengganu.

## **ACKNOWLEDGEMENT**

I would like to take this opportunity to thank my supervisor, Dr Hing Lee Siang for his deed in supervising me in during my final year project. All her ideas and knowledge help me in finishing my project. I would never forget her advises to make sure I am in the right track. I also would like to thank my co-supervisor Mr. Yong Jaw Chuen for his ideas and comment in my work. Not forgetting Dr. Nor Antonina Abdullah for arranging time and tips for us to finish our final year project.

I am also want to thank Mr Sainol Aimi Bin Saidin for her time to teaching me to use GC-FID and solving problem regarding GC-FID. Without him I would not know how to calculate data and operating GC-FID. Also special thanks to Oceanography Lab assistant Mr. Suliman bin Kasim, Mr. YM Raja Razali bin Raja Ghani, Mr. Kamari bin Sulong, and Mr. Kamarun bin Jusoh for providing me with enough chemical and apparatus for my final year project.

I also want to thank to my coursemate, Mohd Faiz Bin Jaya and Hasbullah Bin Mat regarding their help during my laboratory work. I really appreciate it because of their help for me to finish my final year project. Not forgotten all my coursemate for giving me moral support and stay by my side from semester 1 until now

My last special thanks is for my whole family. Especially to my mom, Zaiton Binti Juri and my dad Salam Bin Yahya. They are my motivation to keep me strong to finish my studies as a Marine Science student. I would not be able pay their deed even it take my whole life.

# **DISTRIBUTION OF HYDROCARBON IN SEDIMENT OF SUNGAI KUALA TERENGGANU, TERENGGANU**

## **ABSTRACT**

Hydrocarbon pollution in estuary area has attracts many attention due to it hazardous properties of hydrocarbon. Estuary area is a productive area, thus we must keep it in secure level. Thus monitoring the level of hydrocarbon level in estuary area has become a concern. Some of component of hydrocarbon has demonstrates carcinogenic effect to human body, especially polycyclic aromatic hydrocarbon (PAHs). Purpose of this study is to determine the distribution of total aliphatic hydrocarbon (TAHs) and polycyclic aromatic hydrocarbon (PAHs) at each 9 station and to determine its concentration. Samples were collected using Ponar Grab, back to laboratory it was dried, undergoes soxhlet extraction process, and then it fractionated, lastly samples from each stations were injected into GC-FID. From station 1 to station 9 there are 3 species of TAHs which is n-Pentatriacontane, n-Nonatriacontane, dan n-Tetracontane while 2 species of PAHs which is naphthalene dan acenaphthene are not found in Sungai Kuala Terengganu. For TAHs identification, n-Heneicosane can be found in all 9 stations and its concentration is varies from 1.180ppb to 108.245ppb. For PAHs species that were present at every station is pyrene and Indeno(1,2,3-cd)pyrene. Pyrene is the most abundance species at each station except at station 5 and its concentration varies from 64.604ppb to 8272.39ppb. Indeno(1,2,3-cd)pyrene also can be found at each stations but its concentration is not abundance at each station compared to pyrene, it varies from 3.174ppb to 83.140ppb. In

future, sampling maybe should be done before and after monsoon season to observe whether monsoon affect distribution of hydrocarbon in sediment or not.

# **TABURAN HIDROKARBON DI DALAM SEDIMEN SUNGAI KUALA TERENGGANU, TERENGGANU**

## **ABSTRAK**

Pencemaran hidrokarbon di kawasan muara telah menarik perhatian kerana hidrokarbon membahayakan. Kawasan muara adalah penting kerana ia adalah kawasan yang mempunyai produktiviti yang tinggi, maka kita harus memastikan bahawa muara sentiasa di paras selamat. Justeru itu pemantauan adalah penting. Sebahagian hydrocarbon telah menunjukkan ia akan menyebabkan kanser kepada manusia. Tujuan kajian ini adalah untuk menentukan taburan hidrokarbon di kesemua sembilan stesen kajian dan menentukan kepekatannya. Semua sampel diambil menggunakan Ponar Grab, kembali ke makmal sampel dikeringkan, kemudian ia akan melalui proses pengekstrakkan melalui soxhlet, selepas itu ia dipisahkan dan akhir sekali sampel setial stesen disuntik kedalam GC-FID. Dari stesen 1 sehingga stesen 9, terdapat tiga spesis TAHs iaitu n-Pentatriacontane, n-Nonatriacontane, dan n-Tetracontane manakala dua spesis PAHs iaitu naphthalene dan acenaphthene yang tidak ditemui. Pengenalpastian dilakukan, menunjukkan n-Heneicosane boleh ditemui di kesemua Sembilan stesen dan kepekatannya berbeza-beza dari nilai 1.180pp sehingga 108.245ppb. Manakala spesis PAHs yang boleh kita temui disetiap lokasi adalah pyrene dan Indeno(1,2,3-cd)pyrene. Pyrene adalah spesis yang mempunyai kepekatan yang paling banyak disetiap lokasi kecuali di stesen 5, kepekatannya berbeza-beza dalam lingkungan 64.604ppb sehingga 8272.39ppb. Indeno(1,2,3-cd)pyrene juga boleh ditemui disetiap lokasi tetapi kepekatannya adalah sedikit berbanding dengan pyrene dan kepekatannya berbeza-beza dalam lingkungan 3.174ppb sehingga 83.140ppb. Pada masa akan datang, kajian dan pengumpulan sampel
