LOTION FROM PALM OIL

BY

MAZLIN HARYATI BINTI MOHD SHAFFEI

Approved By,

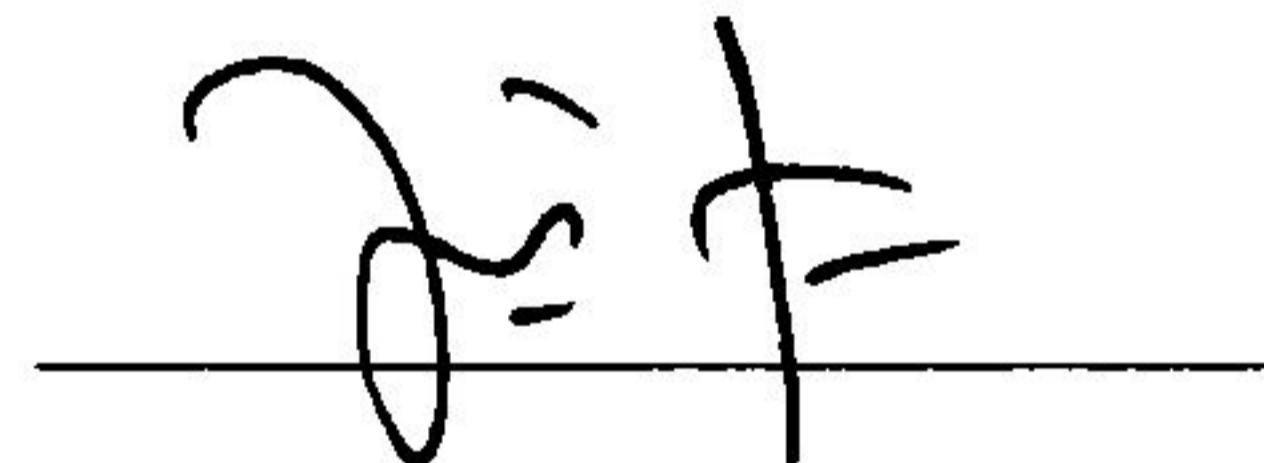

Supervisor

(Prof. Dr. Hamdan Suhaimi)

Date: 8/4/02

Coordinator

(En. Suhaimi Suratman)

Date: 8/4/02

Acting Head Of Department Of Chemical Science

(Prof. Dr. Law Ah Theem)

Date: 8/4/02

ACKNOWLEDGEMENT

In the name of ALLAH, the most precious, the most merciful Alhamdullilah, my deepest thanks to ALLAH The Almighty, for HIS guidance and will, I was able to finish my final year project on Bachelor Science (Hons) Chemistry.

My utmost appreciation to most respected supervisor, Prof Dr. Hamdan bin Suhaimi .for their valuable knowledge, guidance, advises, encouragement and patience throughout to complete my project.

Also a big thank you to my entire friend, whom had always been there with me in good and sad times, especially to all my roommate Ida, Mc Fiza and Wani. My coursemate kak Ayu, kak Na, Mira, Syikin, Nor, Yam and Ida. We were shared our happiness and sadness together for a year to complete our project and finally with our hard work and patience, we were able to complete our final year project, WEEL DONE. May the memories spent together will remain in our heart forever and ever.

To my beloved family, especially ma, pa, abang, Cah, Hafiz, Souffi and adik, I would like to express my gratitude a million thanks for their encouragement, supported moral and materials for me throughout to achieve what I have now. I LOVE ALL OF YOU.

And last but not least, thanks to all related individuals that helped me directly or indirectly, to finish my project. Hope ALLAH s.w.t reply your kidness.

ABSTRAK

Kajian yang dibuat dalam projek ini ialah penghasilan losen daripada minyak kelapa sawit. Minyak kelapa sawit yang digunakan dalam kajian ini ialah minyak masak. Barang kosmetik berdasarkan minyak kelapa sawit lebih baik daripada minyak mineral. Bahan untuk fasa minyak adalah alkohol setil, Tween 80 dan minyak kelapa sawit. Untuk fasa air pula ialah air dan gliserol. Dalam kajian ini, lima gambarajah fasa dibina dan ditentukan kawasan emulsi. Hanya gambarajah fasa CA/Tween 80/Gly yang mengandungi tiga fasa. Untuk menyediakan emulsi, 12 titik telah ditentukan iaitu titik 60%, 70% dan 80% air pada nisbah 70:30 serta 50:50 Tween 80 nisbah gliserol. Selepas proses pengelusian, emulsi disimpan pada suhu 30°C . Kestabilan emulsi ditentukan dengan mengukur peratusan isipadu bagi fasa pemisahan minyak dan air dalam selinder penyukat. Mikroskop optical digunakan untuk menetukan sifat emulsi.

ABSTRACT

The study of the project is the production of lotion from palm oil. The type of palm oil was used from coocking oil. The cosmetic product based from palm oil has better then mineral oil based product. The ingredients for oil phase were cetyl alcohol, Tween 80 and palm oil. Water phase were are used water and glycerol. In this study, five phase diagrams were constructed to determine the emulsions regions only. In the phase diagram, only CA/Tween 80/Gly system have three region. To prepare the sample of emulsion, twelve point were chosen. The points were 60%, 70% , 80% water by weight ratio of Tween 80, and glycerol on 70:30 and 50:50. After the emulsification process, the emulsion were kept at 30⁰C. The emulsions stability were determined by measuring the percentage of volume in the separation phase between oil and water in the measuring cylinder. Optical microscope was used to determine the characteristics of emulsion.
