ESTABLISHMENT TISSUE CULTURE OF *Bruguiera sexangula*

By
Mohd bin Mahmud @ Mansor

Research Report submitted in partial fulfillment of
the requirement for the degree of
Bachelor of Science (Biological Sciences)

Department of Biological Sciences
Faculty of Science and Technology
Universiti Malaysia Terengganu

1100051142

This project should be cited as:

Mahmud, M. M., 2007. Establishment Tissue Culture of *Bruguiera sexangula*.
Undergraduate thesis, Bachelor of Science (Biological Sciences), Faculty of
Science and Technology, Universiti Malaysia Terengganu, 35pp.

No part of this project may be produce by any mechanical, photographic or electronic process, or in the form of phonographic recording, nor may it be stored in retrieval system, transmitted or otherwise copied for public or private use without written permission from the author and the supervisor(s) of the project.

PENGAKUAN DAN PENGESAHAN LAPORAN
PROJEK PENYELIDIKAN I DAN II
RESEARCH REPORT VERIFICATION

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk:
ESTABLISHMENT TISSUE CULTURE OF *Bruguiera sexangula*

oleh **MOHD BIN MAHMUD @ MANSOR**, no. matrik: **UK 10607** telah diperiksa dan semua pembetulan yang disarankan telah dilakukan. Laporan ini dikemukakan kepada Jabatan Sains Biologi sebagai memenuhi sebahagian daripada keperluan memperolehi ijazah **SARJANA MUDA SAINS (SAINS BIOLOGI)**....., Fakulti Sains dan Teknologi, Universiti Terengganu Malaysia.

Disahkan oleh: /Verified by:

Penyelia Utama/Main Supervisor

Nama: **Dr. AZIZ BIN AHMAD**

ACKNOWLEDGEMENT

Alhamdulillah, finally I'm able to finish my Final Year Project. Hereby, I would like to appreciate my project supervisor, Dr. Aziz bin Ahmad for his brilliant advice, unambiguous guidance, constructive comments and undivided patience throughout the course of this project.

Cik Hazlina, Encik Masrul and Puan Fatimah, your deed is etched in my mind for continuous help and guidance.

To my house mates; Nager, Sham, Sharir, Suvik and Aizat and course mates, a tribute for you all for supporting me either up and down. You all make me realize that life has a funny way of helping you out when you think everything's gone wrong and everything blows up in your face.

ABSTRACT

The objectives of this study is to determine the most effective method for surface sterilization, the most suitable media for regeneration and hence to establish a tissue culture technique of *Bruguiera sexangula*. This is because this technology can produce a large number of parent genetically same plants rapidly. In same time, *B. sexangula* is special for having many uses as anti-tumor and produce tannin for leather industry. For this study, explants in form of shoot tips, fruits and seedlings obtained from mangrove area near Universiti Malaysia Terengganu were immersed for various time periods and various concentration of commercial bleach (Clorox) in searching for best surface sterilization method. For tissue culture establishment, Murashige and Skoog (1962) and X media was used. It is found that, the best method for surface sterilization is immersed shoot tips, fruits and seedlings in 90% Clorox for 10 minutes, 60% for 10 minutes and 80% for 10 minutes respectively. Prolong the time was found to damage explants tissue. However, *B. sexangula* was not truly successful cultured due to browning problem and high degree of contamination.

PENGHASILAN TISU KULTUR *Bruguiera sexangula*

ABSTRAK

Objektif kajian ini adalah bagi menentukan kaedah yang paling efektif bagi pensterilan permukaan, media paling sesuai untuk penumbuhan semula dan seterusnya menjalankan kultur tisu terhadap *Bruguiera sexangula*. Ini kerana teknologi ini mampu menghasilkan sejumlah besar tumbuhan yang mempunyai genetik seiras induk dengan pantas. Dalam masa yang sama, *B. sexangula* adalah istimewa kerana mempunyai banyak kegunaan seperti anti-tumor dan juga menghasilkan tannin bagi kegunaan industri kulit. Untuk kajian ini, eksplan dalam bentuk pucuk, buah dan anak pokok diperolehi daripada kawasan bakau berhampiran Universiti Malaysia Terengganu direndam dalam tempoh masa dan kepekatan peluntur komersial (Clorox) pelbagai dalam pada mencari kaedah pensterilan terbaik. Untuk penghasilan kultur tisu, media Murashige and Skoog (1962) serta X telah digunakan. Didapati bahawa cara terbaik untuk pensterilan permukaan adalah dengan merendam pucuk, buah dan anak pokok di dalam 90% Clorox selama 10 minit, 60% untuk 10 minit dan 80% selama 10 minit masing-masing. Memanjangkan tempoh masa didapati merosakkan tisu eksplan. Walaubagaimanapun, *B. sexangula* tidak berjaya dikultur kerana masalah keperangan serta darjah pencemaran yang tinggi.
