PENGAKUAN DAN PENGESAHAN LAPORAN
PROJEK PENYELIDIKAN I DAN II
RESEARCH REPORT VERIFICATION

Adalah ini diakui dan disahkan bahawa laporan penyelidikan bertajuk:
**ANTIOXIDATIVE CONSTITUENTS OF *Morinda citrifolia* (MENGGUDU)
and *Centella asiatica* (PEGAGA)** oleh **MOHD IFWAT BIN ISMAIL** no. matrik:
UK 10563 telah diperiksa dan semua pembetulan yang disarankan telah dilakukan.
Laporan ini dikemukakan kepada Jabatan Sains Biologi sebagai memenuhi
sebahagian daripada keperluan memperoleh Ijazah **SARJANA MUDA SAINS
(SAINS BIOLOGI)**, Fakulti Sains dan Teknologi, Universiti Malaysia Terengganu.

ACKNOWLEDGEMENTS

First of all, thanks to Allah S.W.T that gives an opportunity for me to produce this thesis.

I would like to express my gratitude to my project supervisor, Madam Norhayati Binti Yusuf for her endless advice, guidance, patience and constructive comments throughout the course of this project.

Special thanks to laboratory assistants and science officer specially Puan Fatimah and Puan Ku Naiza and Cik Norazlina Aziz for their continuous assistance and guidance throughout the project.

I would also like to express my thanks and love to my family. Thanks for all your support, patient and endless love that you all gave to me.

To my course mates and friends, I also would like to express my appreciation for the friendship we have.

ABSTRACT

Morinda citrifolia (mengkudu) and *Centella asiatica* (pegaga) has been used as a traditional medicine and these two herbaceous plants are essential for human uses due to its capability to scavenge the free radicals and can cure harmful diseases. The purpose of this research were to determine and to compare the α -tocopherol, ascorbic acid and carotenoid concentrations as well as catalase, ascorbate peroxidase and guaiacol peroxidase specific activities in the leaf tissues of *Morinda citrifolia* and *Centella asiatica*. Results showed that *Morinda citrifolia* contained significantly higher concentrations of α -tocopherol, ascorbic acid and ascorbate peroxidase specific activities compared to *Centella asiatica*. In contrast, *Centella asiatica* contained significantly higher concentration of guaiacol peroxidase specific activities compared to *Morinda citrifolia*. No significant differences were observed in the concentration of carotenoid and catalase specific activities of *Morinda citrifolia* and *Centella asiatica* leaf tissues. Results revealed that *Morinda citrifolia* and *Centella asiatica* were a good source of natural dietary antioxidants.

KANDUNGAN ANTIOKSIDAN DI DALAM *Morinda citrifolia* (mengkudu) DAN *Centella asiatica* (pegaga).

ABSTRAK

Morinda citrifolia (mengkudu) dan *Centella asiatica* (pegaga) telah digunakan sebagai ubatan tradisional dan kedua-dua tumbuhan herba ini adalah sesuai untuk kegunaan manusia disebabkan keupayaannya untuk menghalang radikal bebas dan mengubati penyakit-penyakit merbahaya. Tujuan kajian ini adalah untuk menentukan kepekatan dan membandingkan kandungan α -tokoferol, asid askorbik dan karotenoid serta aktiviti spesifik enzim katalase, askorbat peroksida dan guaiacol peroksida di dalam tisu daun *Morinda citrifolia* dan *Centella asiatica*. Keputusan menunjukkan bahawa *Morinda citrifolia* mengandungi kepekatan α -tokoferol, asid askorbik dan aktiviti spesifik enzim askorbat peroksida yang lebih tinggi berbanding *Centella asiatica*. Sebaliknya, *Centella asiatica* megandungi kepekatan aktiviti spesifik enzim guaiacol peroksida yang lebih tinggi berbanding *Morinda citrifolia*. Tiada perbezaan yang bererti didapati dalam kepekatan karotenoid dan aktiviti spesifik enzim katalase di dalam tisu daun *Morinda citrifolia* dan *Centella asiatica*. *Morinda citrifolia* dan *Centella asiatica* merupakan sumber yang baik untuk kandungan diet antioksidan semulajadi.
