ACKNOWLEDGEMENTS

Praise is to Allah S.W.T with His grace and blessing that guided me in completing this study.

Deepest gratitude to my supervisor, Miss Jamilah Mohd Salim@Halim and my co-supervisor Mdm Wahizatul Afzan Azmi for their sharing knowledge and guidance provided during this work.

Thanks to Forestry Department in Dungun, Terengganu and Cameron Highlands, Pahang, for their permission to conduct this study. I also thanks to the MARDI Cameron management and field staffs assistance. My gratitude also goes to Department of Biological Sciences, laboratory assistant, Mr. Syed Ahmad Rizal and Tuan Haji Muhammad Razali Salam for their kind assistance in the field and laboratory.

Last but not least, to my parents, Shamsuddin Mat Arif and Rohina Abd Razak, and my brother, Sharel Zulfah Shamsuddin for their morale supports and to my colleges in sampling, Aqilah Mohamad, Juhaida Harun and Noor Muslihah Mamat @ Mohammad that helping me to complete the fieldwork. I also would like to thanks to all my friends especially, Ena, Syikin, Rye, Kak Ma, Kak Min, Siti and Kin for their friendship and morale support throughout my third year study. Thank you so much.

ABSTRACT

Tropical rain forests are highly diverse in ecosystems that provide various habitats for insects. Forest ecosystem is identified to harbour majority of insects populations. This study was conducted to compare the diversity and abundance of Coleoptera in Bukit Bauk Forest Reserve, Terengganu and Cameron Highlands, Pahang. Sampling of Coleoptera at Bukit Bauk Forest Reserve and Cameron Highlands were conducted based on elevations of 45 m, 145 m and 245 m above sea level and 450 m, 900 m and 1350 m above sea level respectively. Sample collections were conducted using light trap, canopy beating and visual counting under forest litter and tree bark. At Bukit Bauk Forest Reserve, 27 individuals from seven species representing four families of beetles were recorded and sampled. In Cameron Highlands, 114 individuals of 22 species representing seven families of beetles recorded and sampled. The diversity of beetles community in Cameron Highlands was higher than Bukit Bauk Forest Reserve, but vice versa for evenness. The possible factors affecting diversity and abundance of beetles between sites and within elevations are discussed.

**PERBANDINGAN KEPELBAGAIAN DAN KELIMPAHAN COLEOPTERA
DI HUTAN SIMPAN BUKIT BAUK, TERENGGANU DAN CAMERON
HIGHLANDS, PAHANG**

ABSTRAK

Hutan hujan tropikal mempunyai kepelbagaian ekosistem yang tinggi dengan menyediakan pelbagai habitat kepada serangga. Ekosistem hutan dikenalpasti menempatkan kebanyakan populasi serangga. Kajian ini dilakukan untuk membuat perbandingan kepelbagaian dan kelimpahan Coleoptera di antara Hutan Simpan Bukit Bauk, Terengganu dan Cameron Highlands, Pahang. Kajian dijalankan mengikut ketinggian iaitu 45 m, 145 m dan 245 m dari aras laut Hutan Simpan Bukit Bauk dan 450 m, 900 m dan 1350 m dari aras laut Cameron Highlands. Kaedah yang digunakan ialah perangkap lampu, memukul kanopi pokok, secara penglihatan serta mencari di bawah daun-daun kering dan kayu mati. Di Hutan Rimba Bandar Bukit Bauk, 27 individu daripada tujuh spesis mewakili empat famili telah dicatatkan dan dikumpulkan. Sementara itu, 114 individu daripada 22 spesis mewakili tujuh famili dicatatkan dan dikumpulkan di Cameron Highlands, Pahang. Kepelbagaian komuniti kumbang di Cameron Highlands lebih tinggi daripada Bukit Bauk, tetapi dengan keputusan yang sebaliknya untuk nilai kesamarataan. Faktor yang menyumbangkan kepada kepelbagaian dan kelimpahan Coleoptera di antara dua kawasan kajian dan ketinggian turut dibincangkan.
